

EVERY DEGREE MATTERS

# REMAIN IN CONSTANT COMFORT DURING THE HEAT

## STAY COOL WITH PORTACOOOL

Jennifer is the Managing Editor of the Central Florida Top 5 website. Her and her team shoot a film project every summer in the Florida heat. After years of dealing with the high temps and humidity, Jennifer found an answer to her sticky situation in Portacool portable evaporative coolers.

*I love this unit!!! For our outdoor filmmaking purposes, Portacool's Cyclone 3200 was a WONDERFUL addition to our shoot! Setup was a breeze – pun intended. Cooling down an area took very little time, especially in a time crunch. The unit itself weights about 100 pounds (empty) and fit snugly into the back hatch of my mid-sized SUV with room to spare on the left and right sides.*

*According to my smartphone's thermometer, the temperature got as high as 112 degrees with the Heat Index and humidity at this particular location. We took a small break to step into the garage, and the temperature change was remarkable. Within a minute of stepping into our Portacooled 'trailer,' if you will, the temperature had immediately dropped to the 90s.*

*-Jennifer*

*I stood directly in front of the Cyclone 3200 on its higher fan setting and could be heard in the same area just fine by the crew. So for instance, at a pool party or get together, your guests will be louder – guaranteed!*

Jennifer uses one Portacool Cyclone™ 3200 portable evaporative cooler, which cools approximately 700 square feet. Unlike a fan that simply moves hot, stale air around, Portacool portable evaporative coolers actually cool the air. These American-made products only use a standard electrical outlet and tap water to provide cooling comfort.
