

EVERY DEGREE MATTERS

# TAKE YOUR OUTDOOR SPACE BACK FROM THE HEAT

## KEEPING COOL WITH PORTACOOOL

Jennifer and her family live in sunny Florida. While they love their home state, it can get very hot, which can make spending time outdoors uncomfortable. So how do you stay cool outdoors? They found their answer in Portacool portable evaporative coolers.

Here are a few of her comments:

*Over Memorial Day weekend we hosted a dinner for our family. We turned the Portacool Cyclone evaporative cooler towards the dinner table once we were ready to sit down and eat. Everyone stayed cool and comfortable while dining. It was awesome! It was definitely the talk of the table.*

*Recently, we brought our Portacool along for my friend, Lee's, vow renewal. Our evaporative cooler on wheels offered guests at the ceremony and reception an easy way to stay cool while enjoying their special day. If you're hosting a bigger bash, set up a few Portacool's conveniently throughout the party to keep all of your guests comfy.*

*Whether your little ones are helping plant a spring or summer garden, or playing in the backyard, they can quickly get heated and need a break. The Portacool is the perfect solution to keeping kids (and pets) cool while playing outside.*

The couple used four Portacool Cyclone™ 3200 evaporative coolers, which cool approximately 700 square feet each. Unlike a fan that simply moves hot, stagnant air around, Portacool evaporative coolers actually cool the air. The American-made products require a standard electrical outlet and tap water to provide cooling comfort. Depending on your ambient temperature and humidity levels, they can provide as much as to a 30 degree temperature drop.
