# REMAIN IN CONSTANT COMFORT WHILE AT WORK

## STAY COOL WITH PORTACOOOL

James MacKenna is the Operations Manager at the Zoeller® Company's Taiwan facility. Zoeller is one of the oldest, independently-owned U.S. pump manufacturers in the world. Being located in a tropical climate, keeping approximately forty direct labor personnel in a comfortable and safe environment is a crucial job. After trying many possible solutions, such as exhaust fans, James found they only provided airflow-there was no cooling. He then found an answer to their problem in Portacool portable evaporative coolers.

Even with the facility's structure being susceptible to natural airflow, cooling an eighty meter long concrete assembly line is not a simple task. James knew some type of prevention had to be put into place to prevent potential heat stress. After installing Portacool evaporative coolers, James and his personnel immediately noticed a difference. Morale improvement was obvious and employee attrition reduced, especially for new hires. Production rates began to rise.

"The top benefits we saw after investing in Portacool evaporative coolers were reduced employee turnover due to a more comfortable environment and a marked improvement in morale," James said.

Zoeller employees now work in a comfortable and safe environment everyday.

Zoeller Pump Company currently uses six Portacool 36" Variable Speed portable evaporative coolers in their facility, which cools approximately 2,650 square feet each. Unlike a fan that simply moves hot, stale air around, Portacool portable evaporative coolers actually cool the air. These American-made products only use a standard electrical outlet and tap water to provide cooling comfort.
